CivilitySync preview facts - 7 November 2026

This is a pre-release prototype. It uses fictional data.
It is not accepting operational customers. It is not a launch.

What a person can do on this computer
- Save one fictional job named DEMO-JOB-001.
- Mark it in review, then reviewed, then closed as a test.
- See that same saved job on a sample castle drawing.
- Save fictional evidence. No points are added.
- Read the notice: sample checks stay unverified.

What it does not do
- It does not book, take payment, file, or send a message.
- It does not connect to an outside service or a public site.
- It does not prove a certificate, a filing, or a tax step.
- The castle is a new sample. The earlier sketch was not located.
- Nineteen sample checks stay unverified and not green.

Local API check, after unpacking
```
python3 tests/shared_e2e_scenario.py --api-only \
  --execution-environment parent_local --output run-output
```
Expect one job, status closed_test, four history events,
one synthetic score event, points empty, zero green walls.
That command does not start a browser.
Independent review of this build stays pending until a
separate reviewer signs it. This page is not that signature.

Hosting is not purchased and not deployed. No public URL.
A candidate Render base of 7.25 USD per month, plus usage
and tax, is not a bill cap and is not approved. See
HOSTING_READINESS.md before any purchase.
